

micro flow

**Now you can measure flow rates
as low as 1 GALLON PER MONTH !!!**

Weber Sensors announces the latest breakthrough in low flow sensing technology:

The revolutionary *micro flow* is taking the Weber plumbid "calorimetric principle" to the next generation.

It can measure flow of any liquid medium... Water, Oil, Grease, Silicone, aggressive chemical medium... and provide an accurate output proportional to flow rate.

- Pipe sizes from 1" to as small as $\frac{1}{4}$ " in diameter.
- Uniquely 4-20 mA output proportional to flow rate.
- Ideal for during applications, where measurements previously were unattainable.
- No moving parts.
- Completely Solid State.
- Easy to install.
- Small compact size.

Flow ranges from 0 to .001 Gallons per Hour (0 to 5 ml per Hour)
